☰   Video: SELECT & FROM

Here you were introduced to the SQL command that will be used in every query
FROM ....

1. **SELECT** indicates which column(s) you want to be given the data for.

2. **FROM** specifies from which table(s) you want to select the columns. Notice
   exist in this table.

If you want to be provided with the data from all columns in the table, you use "

- SELECT * FROM orders

Note that using SELECT does not *create* a new table with these columns in the da
the data to you as the results, or output, of this command.

You will use this SQL SELECT statement in every query in this course, but you will
additional statements and operators that can be used along with them to ask mc
questions of your data.
